

Control controllers statement

Espoo Central Park and the Vanttila industrial area with its parks offer a great setting for cycling. The area has a varied range of lanes, there is a fast-paced outdoor road, trails that require walking and everything in between. Skilled bike handlers get to utilize their skills, especially over long distances. On the other hand, those who feel that their driving skills are still being honed can choose routes that are more suitable for their driving skills.

The sprint emphasizes the fluency of navigation on tracks with diverse terrain types. Over the long distance, competitors will be able to take advantage of their own strengths in route choices. In path-rich terrain, choosing the right grooves requires precision. Encounters can't be completely avoided either, so be careful and remember to consider your competitors.

Describing different tracks of the terrain has been a challenging task. Thus, the smallest paths that are difficult to detect are not described on the map. On open cliffs, grooves are omitted if the groove is not clearly visible. However, I think that the map has described the very most important things for cycling. Unfortunately, there are a lot of forbidden areas, I hope they don't affect orienteering performance too much.

Please pay attention to other outdoor enthusiasts with due care. There are many other outdoor enthusiasts, mountain bikers and trail runners on the terrain.
